

ABSTRACT

1 A safety switch includes a casing having a first terminal plate having a first contact
2 point and a second terminal plate to which an end of a bimetal plate is connected. A second
3 contact point is connected to a tongue of the bimetal plate. A switch member is connected to the
4 casing and a connection member is connected to an end of the switch member. An end of the
5 connection member has a recess and an end of the bimetal plate is movably located in the recess.
